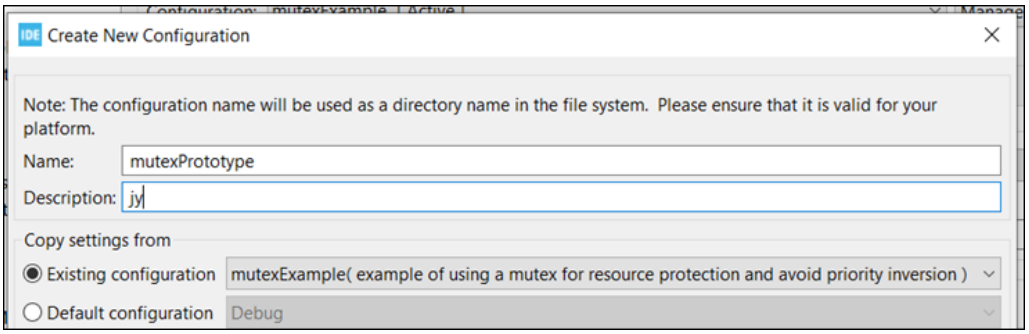
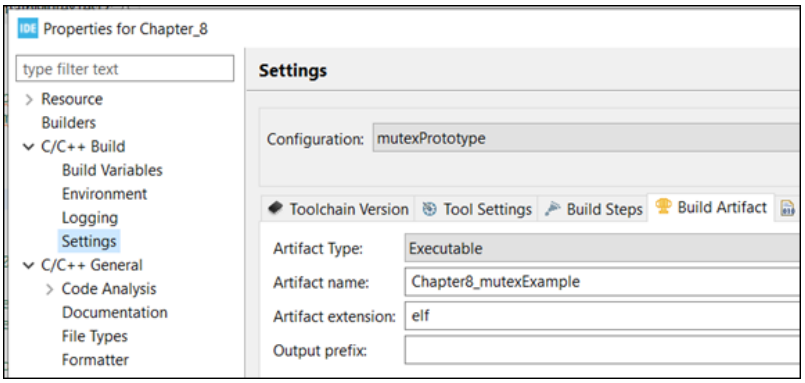
- Click "OK"



1.2.2 Set-up the new configuration

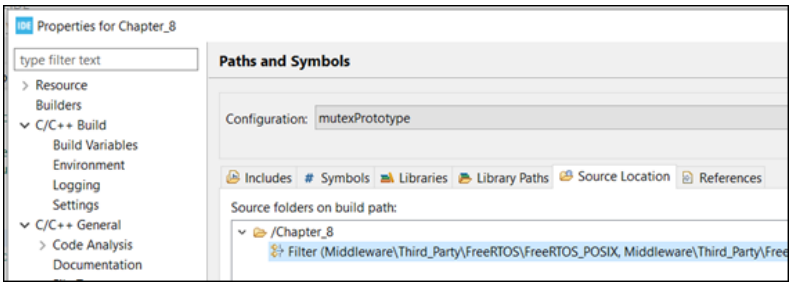
- In the Project Explorer, right-click on the chapter-folder, and select:
  - `Properties` : "`C/C++ Build`" : `Settings`

- Select the "`Build Artifact`" tab
  - In the `Configuration` box, select the new configuration.
  - Set the "`Artifact name`" box,
    - For example, to `Chapter8_mutexPrototype` (the figure mistakenly shows a different name)



- In the `Properties` GUI, select
  - "`C/C++ General`" : "`Paths and Symbols`"

- In the "`Paths and Symbols`" window:
  - Select the new `Configuration`
  - Click on the tab "`Source Location`".
  - Then, click on the button "`Edit Filter...`"



- Update the list of C-files to exclude for the new configuration
  - For the configuration that was copied, add its C-file to the ""`Exclusion patterns`"
  - In this example, the copied configuration was `mutexExample`. It's C-file is `Src/mainMutexExample.c`. So that C-file is added to the exclusion patterns.
  - Click on "`Apply and close`" to save
