Home / Study Guide   Comments

o   This worked using the current packages on 12/2021.

o   Among the packages listed in `requirements.txt`, only these are needed. The others can be
    removed from the list.

```
astroid
colorama
isort
lazy-object-proxy
mccabe
pylint
pyserial
PySimpleGUI
pythoncrc
PyYAML
six
wrapt
```

- **Additional info, page 357**
  - o   Tera Term can also be used to send commands to the board.
  - o   In Tera Term, a macro can be used to send binary strings. An example is below.
  - o   To run the macro:
    - Save it as a file, e.g., `colorSelector.ttl`
    - In Tera Term, run the macro file via: `Control : Macro`
  - o   Tutorial on TeraTerm macros:
    - http://www.softpanorama.org/Utilities/Teraterm/teraterm_macros.shtml
  - o   An example Tera Term macro is below. The CRC values do not actually get checked by the code
    on the board, so those values are specified as 0's.

```
; Command format: <STX><Cmd><red><green><blue><CRCLSB><CRC><CRC><CRCMSB>

; Loop 5 times
for i 1 5

    ; Turn all on
    send$02$01$00$00$00$00$00$00$00
    timeout = 2  ; 2 seconds
    wait "force timeout"  ; wait for timeout

    ; Set intensity
    send$02$02$20$20$20$00$00$00$00
    timeout = 2
    wait  "force timeout"

    ; Turn all off
    send$02$00$00$00$00$00$00$00$00
    timeout = 2
    wait  "force timeout"

next
```
